# Road

for closing of cracks and smaller potholes

## RoadStixx

These revolutionary thermoplastic sticks are optimally suited for repairing cracks and small potholes (up to Ø 20 cm, H 45 mm) in asphalt and concrete. BORNIT® RoadStixx do not only repair small damages caused by frost, but also prevent them from developing into large potholes. Just 20 minutes after application the road is traversable - thanks to the simple 6-step application principle. When applying BORNIT® RoadStixx, only a road broom and a gas burner are additionally required. To ensure an anti-slip surface after application and to avoid ghost markings, we recommend sprinkling the repaired surface with BORNIT® High-quality chippings 1/3.

By melting the thermoplastic, it liquefies and penetrates into every corner of the crack or small pothole. This creates an optimal bond to the substrate. BORNIT® RoadStixx can even be used in winter - therefore, even in cold temperatures, a rapid repair can be carried out immediately after a crack or breakout is found - and at any time of year!

- for repairing cracks and small potholes
- suitable for all seasons
- traversable after 20 minutes
- for asphalt and concrete
- easy to use - only one person needed
